

The “2nd Annual Meeting” took place from 6th to 10th of October 2008 at Machakos in Kenya. The main targets were to get an overview on the work performed during period two, as well as the future planning for the last year of the BOMOSA project. As this meeting was at the end of period 2 an important aspect was the finalization of the second periodical reports (Management and Activity Report), which was partly done during the “periodical report workshop”. On the last two days an activity plan for period 3 was prepared for every active workpackage in the next year that the work of the project could be fulfilled within the proposed time.

Group picture

On the second day of the meeting an excursion to the BOMOSA plots in the area of Machakos was organised. The first stop was at Ngeki dam where we got a feedback of the plot community. Then the participants of the meeting moved on to Lukenya School where we had a discussion with some students and their teacher.

Excursion to Ngeki dam

On the way to the BOMOSA pier (Ngeki)

Discussion with and feedback of the community members (Ngeki)

The BOMOSA fish (*Oreochromis niloticus*)

Visiting BOMOSA plot at Lukenya

Having a look on the cages and the fish (Lukenya)

Discussion with students at Lukenya school

Additionally to all a TV-team from the Czech Republic attended our meeting. A part of their TV project, which is funded by the EC, should cover the BOMOSA project. Therefore they visited all three countries where BOMOSA plots are implemented and they also had some interviews with leading characters of the project (article will be soon available on this homepage).
